摘要 报道真藓科(Bryaceae)直齿藓属(*Orthodontium*)一新种, 具边直齿藓 *O. bilimbatum* X. J. Li et D. C. Zhang。本种主要特征(1)蒴齿双层, 内齿长, 狭线形, 无基膜。(2)叶边缘明显分化, 具2~3列狭长细胞, 除近尖部和基部边缘外, 明显两层。(3)叶细胞明显宽于本属各种(宽达18~24 μm)。(4)蒴盖短圆锥形, 无长喙状尖; 本种介于 *Orthodontium* 与 *Orthodontopsis* 两属之间, 根据蒴齿双层之重要特征, 应隶属于前者, 又因其独具以上特征, 故在该属下建立一独立的新组, 即 Section *Bilimbatum*, 本种即为该组模式。原模式存昆明植物研究所隐花植物标本馆。

Abstract The genus *Orthodontium* of the family Bryaceae is newly reported from Yunnan, China. The *O. bilimbatum* X. J. Li et D. C. Zhang as a new species, found in the Mt. Meilixueshan, Northwestern Yunnan, China, is described in Latin and illustrated in this paper. It is of main characteristics of (1) the double peristomes being not in well-development, (2) bistratose leaf borders, consisting of 2~3 rows of elongate-linear thick-walled cells which occur on all leaf margins except for the apices and proximal bases, (3) the cells in middle of leaf 60~100 μm long and 18~24 μm wide, (4) opercule short conical without beak on it. The characteristics of the new species are between genera of the *Orthodontium* and *Orthodontopsis*. With double peristomes as an important character of *Orthodontium* on taxonomy, the new taxon should be classified into the genus. In addition, 2, 3 and 4 characters mentioned above are special in this genus, so a new Section *Bilimbatum* is proposed. The species as a holotype of the new section is deposited in Cryptogamic Herbarium, Kunming Institute of Botany, Academia Sinica(HKAS).

Key words *Orthodontium*, *O. bilimbatum*

本属大部分种分布于南半球各地，北半球约有 6 种，我国台湾省已知一种；*O. infactum*，另在近邻地区锡金记录过一种 *O. novae-guineae*；原该属主要特征为叶狭长线形，边缘无分化，叶中部细胞线形至长六角形。孢蒴近直立，无环带，具双齿层，内齿基膜低矮或缺如，节片狭线形，蒴盖多具斜喙。W. Meijer (1952) 将该属分为两组，即：Section *Stableria* 和 Section *Orthodontium*，后者又分为两亚组 Subsection *Pelluceus* 和 Subsection *Linearis*；两组特征分别为：前组，叶狭长线形，中肋无厚壁细胞束。孢蒴卵状楔形；后组，叶线形，线状披针形，具光泽或叶绝对全缘，蒴盖多具斜长喙尖。该属叶细胞多为线形或长六角形，宽不超过 $18\ \mu\text{m}$ ，而本种叶缘分化特征明显，叶细胞明显宽及蒴盖圆钝，均不得隶属于本属各组。此外 M. S. Ignatov 和 C. Tan (1992) 报道本科一新属：*Orthodontopsis*，我们注意到本种与这一新属的 *O. bardunovii* 种的配子体形态特征极其近似，似乎应属该属另一种。但该属无外齿层，仅具非常退化的内齿节片，而本种确具两层蒴齿，经核对并排除本科其它各属特征后，认为本种应介于 *Orthodontium* 与 *Orethodontopsis* 属之间，由于蒴齿这一重要特征，我们确认本种应隶属于前一属无疑，但在该属中，又因配子体独特的形态，与本属其它组有着较大区别，故另建立一新组，即：Section *Bilimbatum*，本种即为该组模式种，模式标本藏于昆明植物研究所标本室(HKAS: 75997)。
